		transformer unit. Vessels using this pier secure a box line to a buoy just off the northern end of the pier. Stern lines are secured to the pier. A thuy formerly located just off the southern end of the pier has been removed. The source stated that his vessel loaded to 29 feet 6 inches at low water alongside this pier.
	5•	Pungue Wharf: The Pungue (Pungwe) Wharf has five berths for ocean-going vessels and is the only deep water wherf for general cargo. Depth alongside is 30 feet at low water springs. The wharf is equipped with fifteen 3-ton electric cranes and nine 6-ton electric cranes. There are also transit sheds on the wharf.
	6.	Chiveve Wharf: The Chiveve wharf is only used by lighters and small craft. It is equipped with one 15-ton crane, one 5-ton crane, and eight 3-ton cranes, all steam.
	7.	New Ore Dumps: Two ore dumps are nearing completion immediately behind the new ore pier. These dumps are approximately 1500 feet long and 400 feet wide and are situated one on each side of the conveyor belt, at the shore end of the pier approach. Concrete floors have been completed; shovels and hoppers are to be installed at a later date.
	8.	Railroad Facilities: A railroad spur is located adjacent to the dumps and will supply the dumps when they become fully operational. At the present time (May 1953) railroad cars are shunted in and out and the ore is shoveled manually onto the conveyor belt. The source was told by local stevedores that the railroad authorities had stated they would be able to furnish the conveyor with only enough ore per month for it to operate steadily for five days and nights (assuming it was to operate continuously). This limitation is reportedly due to the inadequacies of the rail system and the shortage of rolling stock.
	9.	Labor: Dock labor at Beira will work around the clock. For vessels loading ore, breakfast and supper hours may be changed so as to work in with the shunting of railroad cars which bring in the ore from the mines. The dock labor and crane operators are supplied by the port and clothed, fed and housed by the port, with the exception of the Portuguese who clothe and feed themselves. The labor working on board vessels is supplied by the stevedoring companies. All of the foremen are Portuguese and the ordinary laborers are native. Some of the natives are housed in compounds, while their families live out in the country. This creates a problem around the various holidays when most of the natives leave to join their families and a shortage of labor may develop.
	10.	Repair Facilities: Repair facilities are very limited. Welding and small repair jobs are about the largest projects which can be handled satisfactorily by local shops.
	11.	Lighters: There are approximately 50 lighters at Beira, most of which appear to be in a fairly good state of repair. These lighters are used quite extensively.
	12.	Water & Stores: No drinking water can be supplied. Stores are of low quality and are not recommended.
	13.	Town of Beira: The source has visited Beira regularly during the past eight years and believes that the area is making a slow but steady progress in its overall development. A street lighting system is being installed, many miles of streets are being paved, a new hotel is under construction, and a water supply system is scheduled for completion within a year's time.
	14.	Port Expansion Plans: Port expansion plans call for the construction of berths number six and seven between the Fungue Wharf and the new one pier. The latter pier is now designated berth number eight. This project would require reclamation of large areas of marsh land and is considered to be a very long range plan. The source further advised that in a conversation with the Governor General of Mozambique, the Governor had expressed sentiments against the installation of the conveyor belt and other improvements at Beira because he felt that the Province could not afford the expense of blasting a channel through the corral reefs off Beira, and thus Beira probably never would be able to obtain the status of a major port.
		Available on loan from the CIA Library is one brochure entitled "Boletim" published by the Directorate of Maczambie Harbours, Railways and Transports, Jan, 1953 edition.

PORTOS, CAMINIOS DE FERRO E TRANSPORTES DE MOÇAMBIQUE

BOLETIM
PROPAGANDA E PUBLICIDADE

ANO DE 1953 - JANEIRO - Nº 1

1952 - 1953

Não tarda que a última folha do calendario de 1952 seja arrancada para dar lugar à primeira do ano de 1953.

Tal como sucedeu em 1951/52 não faremos o balanço da actividade do nosso Boletian apenas desejamos deixar inserta nesta página a consciente afirmação de que fizemos o melhor que pudêmos, e continuamos animados da vontade de cumprir, e de bem servir os nossos leitores.

O que está feito pode ser tomado como garantia dessa vontade, mas nada se poderá fazer se os leitores e especialmente os anunciantes do Boletim nos retirarem a sua conflança.

É pois a eles especialmente que se dirigem os nossos cumprimentos com os melhores desejos de um Novo Ano repleto de felicidades pessoais e repleto de prosperidades nos seus negócios.

Que o Boletim da Direcção dos Portos, Caminhos de Ferro e Transportes de Mogambique continue a colaborar levando aos cinco cantos do Mundo os nomes dos seus anunciantes é o descio de quem dirige esta publicação, que procuraremos melhorar sob todos os aspectos para atingir plenamente a nossa finalidade, dando desta forma maior certeza nos resultados da propaganda aqueles que em nos confiaram.

As noticias que nos chegam de quase todos desejarem manter a sua publicidade no Boletim dos Portos, Caminhos de Ferro e Transportes, e bem assim os que de novo vém até nos são a melhor esperança de ver realizados os desejos que expressamos e que são afinal os dos nossos anunciantes.

Mais e melhor!

1952-1953

Before long the last page of the 1952 calendar il be torn off to make way for the first of the year 1953.

Again, as in 1931/1952, we are no soing to give an account of the activity of our be letting we only wish to insert here our conscious affirmation that we have done the best we could, and will continue, encouraged by the desire to accomplish and to serve

What has been done, has been done through this desire, but it would be of no avail it the renders, and especially the advertisers, of the Bulletin were to withdraw their confindence in us.

Accordingly it is to them especially that we direct our compliments and our best whiles for a New Year full of personal happiness and replete with prosperity in their blusiness.

That the Bulletin of the Directorate of the Mozambique Harbours, Railways and Transports may continue to collaborate in taking the names of its advertisers to the five corners of the World, is the desire directing this publication, and that we may seek to improve from all aspects to fully attain our goal, in this way assufing those who trust in us of better results in propaganda.

The requests that reach us from nearly all advertisers to maintain their publicity with the fulletin of the Harbours Zailways and Transports, as well as the requests of those who some to us anew, are our best hope of seeing the wishes we have expressed fulfilled, the wishes which are after all also those of our advertisers.

1952-1953

Bientôt la dernière feutile du calendrier de 1952 sera arrachée pour laisser place à la première de l'épliéméride 1953

Comme pour 1951/59, nous ne ferons pos comme pour 1931/8", nous ne terons pur la balance des activités de notre Bulletin: nous voulons scalement affirmer, dans cette page, que nous avons fait du mieux que nous avons pui, et que nous con-tinuons animés du désir de bien rempilr notre tâ-che et de bien servir nos lecteurs.

Ce qui a éte fait, peut être pris comme la garantie de ce désir, mais rien ne pourra être falt ai les lecteurs, et en particulier, les annonceurs, nous retirent leur confiance.

C'est donc aux uns et aux autres que nous adressons nos compliments, avec nos meilleurs voeux d'un Nouvei An prospère et heureux.

Que le Bulletin de la Direction des Forts, Chemina de Fer et Transports du Mozambique pulsse continuer à collaborer en portant aux cinq parties du Monde les noms de ses annonceurs, c'est le desir de qui dirize cette publication. Nous chereberons à l'ame-liorer soit tous ses aspects, afin d'atteindre inte-gralement notre but, qui est de créer une plus gran-de confiance dans les résultats de la publicité qui nous a été confiée.

D'après les bruits qui nous sont parvenus, presque tous, nos annonceurs déstrent maintenir leur publicité dans le Ruiterin des Ports. Chemins de Fre et Transports. Beaucoup d'autres aussi veulent nous confier le même travail. C'est ce qui constitue le meilleur espoir de voir réalisés les voeux que nous formulous et qui sont auxi ceux de nos annonceurs,

ENGENHEIRO FERNANDO SEIXAS

Encontra-se novemente entre nos o Sr. Eng.' Fernando Seixas, que, apos haver dirigido a parte final da construcão da linha do Comunho de Perro de Tete, foi colocado na chefia de uma brigada de construção do caminhos de terro em Angola, onde os seus serviças foram louvados.

O Sr. Eng. Seixas, depois de tima auxència de cerca de dois anos e meio, regressa ao servico dos C. F. M., tendo sido colorado na chefía da Divisão de Mocambique

ENGINEER FERNANDO SEIXAS

There has recently arrived among us Errimeer Fernando Beixas, who, after having directed the final stages of the construction of the Tete Railway Line, was placed in charge of a Railway construction crew in Angola, where he cented merit for his work.

Engineer Scissas returns to the service of the C. F. M. after an absence; of about three years, having been assigned to the management of the Mozambique Division.

INGENIEUR FERNANDO SEIXAS

Nous avons à nouveau parmi nous M. l'Ingénieur Sous avons a nouveau parmi nous ai, Ingenieur Fernando Seixas, qui, après avoir dirigé la place l'innele de la construction de la ligne du Chemin de Fer de Tete, a été placé comme chef d'une brigada de construction en Angola, ou ses services ont été très apprécies.

Après une absence d'environ 3 ans, M. l'Ingénieur Seixas retourne aux C. F. M. et a été placé à la tête de la Division de Mozambique,

Pagina 6

HOLETIM - JANEIRO DE 1953

NOVO DIRECTOR DOS C. F. M.

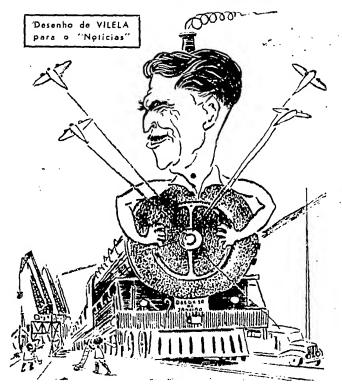

No dia 30 do corrente tomou posse do cargo de Director dos Serv.cos dos Portos. Camunhos de Ferra e Transportes de Moçambique, o Sr. Eng. Arnaldo Pacheco Percira Leite, engo para que havia sido nomeado por S. Exa, o Sr. Ministro do Ultramar, conforme noticiámos no nosso Boletím anterior.

A posse foi-lhe dada por S. Exa, o Sr. Governador-Geral e a certimón realizouse na sala das Sessões do Conselho de Governo, na presenca do General Comandante Militar de Moçambique, Almirante Couceiro Presidente da Câmara Municipal, Procurador Geral da República, Inspector Superior de Fomento, Ensenheiro Pinto Teixeira, antigo Director dos C. F. M. Chefe do Departamento Marítimo. Chefe do Estado Maior, Director dos Serviços, todos os altos funcionários civis e militares de Lourenço Marques, bem como multos ferroviários e amigos pessoais do Sr. Eng. Pereira Leite que por completo enchiam o salão e se extendiam pelos corredores do edificio.

S. Exa, o Sr. Governador-Geral fez um breve discurso que transcrevemos na integra:

«Sr. Director:

Embora V. Exa, tenha assumido a direcção de um dos Serviços mais importantes da Provincia, quase não tenho que lhe dizer, porque foi V. Exa, formado na escola de trabalho e de colaboração dos cuminhos de ferro, tendo sempre acompanhado, como seu directo colabo-

HOLETIM - JANKIRO DE 1953

rador, o antigo director, engenheiro Pin to Teixeira. Como tal, não precisa que se lhe diga nada nem eu nada tenho a direr, porque sempre mostrou estar intelramente instruido dentro do espírito dos Servicos que está agona a dirigir, porque sempre com acerto se soube desembenhar da sua missão mas inumeras vezes em que interinamento compou o lugar de que hojtoma posse. Por isso sá tenho que me congratular e dizer-lhe da muita satisfação em al o parte.

O Sr. Eng. Pereira Leite responden nos termos seguintes:

«Nunca iui homem para discurso, e muito menos em ocasiões como esta. São sômente duas palavras para agradecer as que V. Exa., Sr. Governador-Geral, me dirigiu, ditadas pela amizade com que V. Exa. estar certo que encontrará sempre a melhor bas vontade, pois que só è meu desejo bem servir esta Provincia, onde já estou há dezoito anos, e pode V. Exa. sempre contar com a minha colaboração, como espero que me dará sempre o apoto necessario para bem cumprizs.

«A todo», muito obrigadoi».

Finda a cerimônia o novo Director dos C. F. M foi muito cumprimentado.

THE NEW DIRECTOR OF THE C. F. M.

On the 30th instant Engineer Arnaldo Pacheco On the 30th instant Engineer Arnaldo Pacheco Pereira Leite took over the position of Director of the Mozambique Harbours, Railways and Transports, the position to which he was appointed by Ris Excellency the Minister of the Overseas, as we have already announced in our previous Bulletin.

He was invested by His Excellency the Governor-General and the ceremony took place in the Government Council Chamber in the presence of the Military Commanding General of Mozambique, Admiral Coucelro, the President of the Minnerpal Council, the Attorney General of the Republic, the High Inspector of Development and former Director of the C. F. M. Engineer Pinto Teixeira, the Chief of the Maritime Department, the Head of General Staff, Directors of Services, and all the eminent civil and military officials of Lourence Marques as well as many railway and personal irlends of Engineer Prefix Lette who completely filled the Chamber and overflowed into the Corridors of the building.

in Excellency the Governor-General made a short speech which we give in full:

aMr. Director:

It is hardly necessary for me to tell you that you have assumed directorship of one of the most important Services of the Province, because you have been trained in the school of work and collaboration of the Railways, having always accompanied, as your immediate collaborator, the former Director, Railmer Pinto Teixeira. Such being the case, there is no need for me to tell you anything, nor have I anything to tell, since you have always shown yourself to be perfectly versed in the spirit of the Services which you will now direct, and since you have always known to discharge your pintsion with windom upon the immunerable occasions when you were acting in the position of which you will not to congratulate you and tell you with how much pleasure I see you in this positions.

NOUVEAU DIRECTEUR DES C. F. M.

Le 36 courant, Monsteur l'Ingénieur Arnaldo Pacheeo Pereira Leite, a pris possession des fonctions de Directeur de, Services des Ports, Chemins de Per et Transports du Mozimblaue oût, comme nous l'avons annonce dans notre Bulletin précédent, il avait été nommé par Son Excellence Monsteur le Ministre d'Outre-Mer.

Les fonctions lui ont été remises par Son Excellence Monsieur le Gouve neur Général, et la cérémonie
réset réalisée dans la salie des Sessions du Conseil
du Gouvernement. Y étaient présents: le Général
du Gouvernement. Y étaient présents: le Général
du Commandant Militaire du Mozambique, l'Amiral Couceiro, le Président de la Chambre Municipale, le
Procureur de la République, l'Inspecteur Supérieur
du Développement et ancien Directeur des C. P. M.,
Ingénieur Pinto Teixeira, le Chef du Département
maritime, le Chef de l'Etta-Mijor, les Directeurs de
Services, tous les hauts fonctionnaires civils et militaires de Lourenco Marques, ainsi que beaucoup de
cheminots et amis personnels de Monsieur l'Ingénieur Péreira Leite, remplissant complétement la
salie et même les coutoirs du bâtiment.
Bon Excélènce Monsieur le Gouverneur Général
a pronoticé le court discours que nous reproduisons
cl-après: Les fonctions lui ont été remises par Son Excellen-

(Monsteur le Directeur)

Monsteur le Directeur:

Bien que vous ayez assumé la direction de l'un des services les plus importants de la Province, je n'ai presque rien à vous dire, car vous avez été forms à l'école de travail et de collaboration des chemins de fer. Vous nyez toujouis accampligné, comme premier collaboration. Tamelen Directeur, l'Ingenieur Pinto-Teixeira. En cette qualité, il est mutile de vous dire quoi que ce soit, et le n'ai rien à vous dire, car vous avez toujours montré combien vous étiez penetré de l'espit des Services que vous dirigez maintenant et que vous avez toujours su remplir avec sagesse voir mission toutes les innombrables fois, ou vous avez occupe pir intérim, le poste que je vous confie au-jourd'hui, de n'ai donc qu'a m'en félicter et à vous dire toute la satisfaction que je ressens a vous voir occuper ces fonctions s.

Lastanov. Perenia Lette v reply was as follow-

of have never been a man for speeches and least of all on occasions like this. Allow me only to thank Your Excellency, the Governortiencial, for the words you have addressed to me, words dictated by the friendship with with tyur Excellency honours me.

eYour Excellency can be assured that you will always find me willing, for I have but one wish namely to serve well this Province that has now been my home for eighteen years. Your Excellency can always count upon my collaboration, as I likewise trust that you will always give me the necessary support for accomplishment.

«Many thanks to all!».

After the decembing the new Director of the C. F. M. was warmly complimented.

«Je ne suis pas un homme a faire des discours et encore moins dans une occasion comme celle-et. Je ne dirnt donc que quelques mots pour remercher de ceux que Votre Excellence M. le Gouverneur Général avez bien voulu m'adresser et qui ont été dictés par famillé dont vous voulez bien m'honorer.

Voire Excellence peut être sure qu'elle trouveia foujours en mot la meilleure bonne vofonté, car, mon seul désir est de blen servir cette Province ou je suis déja il y a dix-huit aus. Votre Excellence peut compter toujours avec ma sallaboration, comme mol même le compte que vois m'accorderez toujours l'appui necessaire pour blen reimplir ma missions.

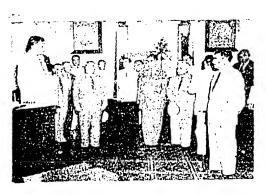

A tous, me, vits remerciements-s.

A fissue de la ceremonie, le nouvour Directeur de $(C \setminus F)$, M a été vivement feltette.

As tres lotografías mostram o Sr. Eng. Pereira Lette ao tomar nosse do novo cargo de Director dos Servicos de Portos, Caminhos de Fetro e Transportes de Mocambique.

BOLETIM JAMEIRO DE 1953

NOVA LINHA FERROVIÁRIA LOURENÇO MARQUES-RODÉSIA DO SUL

Causou a maio, satisfação em todo o territí o de Moçambique, e muito especialmente na regide de Lourenco Marques, a noticia publicada pela Imprensa diaria, em meados deste mes, dando conhectmento de ter sido assinado o contrato para o financiamento da construção do prolongamento da linha férrea do Guijá até a fronteira da Rodésia do Sul, que em toda a sua extensão passa a denominor-se

Esta via ferroviària que terà o comprimento total de cerca de 482 quilómetros, poderá dividir-se em duas partes; uma que já se encontrava construída, medindo 160 quilómetros, e outra que esta em construida.

A primeira, tem a sua origem na Moamba, estação onde entronca na linha de Louienco Marques ao Transval, a 53 quilómetros desta cidade, e se desenvolve em terreno de declive suave, com poucas e faceis curvas, até o Guijá, junto do rio Limpopo.

A segunda, de o prolongamento da primeira, comecando portanto no Guija. Percorre 23 quilometros ate o local onde se val construir a barragem do rio Limpopo e, atravessindo-o sobre a estrutura da propria barragem, segue a margem esquerda deste rio para montante, até atingir a linha de alturas que divide as bagis hidrográficas do Limpopo e as planicies baixas do Norte, cortadas nor numero as linhas de água de pequena importância, mas de grande valor, quando convenientemente aproveitadas, para fins pecuários, visto o gado all encontrar óptimas pastagens.

Mantém-se depais mesta linha de alturas até a confluência do rio Limpopo com o rio Nuanetzi. De aqui segue a divisória das águas deste último rio e as planicies a Norte, indo cruzar a fronteira junto do marco nº 14, onde figará com a linha férrea da Rodésia que também se encontra em construcão e cujos trao diao, proxidem sincrônicamente com os nossos.

Toda a linha se desenvoive com rampas que em regra não excedem 0.0005% e curvas de raio mi-nimo superior a 1.000 metros, tendo-se na ultima parte do percurso conseguido estabelecer um alinha-mento retro com a extensão de 110 quilómetros.

mento recto com a extensão de 110 quilometros.

Apos ir de so agora ter sido assinido o contrato de financiamento, a nossa Administração conceou os trabalho, do profongamento desta via ferica em meados, do ano transacto, havendo completado o troco eté o Limpopo e prepurato mais 24 quilometros de terreno, para elém do rio, utilizando para 180 2.500 trabalhodores indigentas, numero que val agora ser aumentado para 5000, e espera terminar a construção contacido do 10.15.

trabalhadores indigenas, número que vai agora ser aumentado para 5 000, e espera terminar a construção antes do fim de 1935.

Esta linha, há muito havia sido suscrida pelos portugueses, que, apercebendo-se do rápido desenvolvimento dos terinforios da Africa Central, nomeadamente da Rodésia do Sul, previam dificuldades no livre escamento do seu tráfego com os países de alem-mar, dentro das imposições de ordem economica actual, e que sem divida se tornaráo cada vez mais exigentes.

Na verdade, calculando-se que o volume desse tráfego deve atingir cerca de 6 000 000 de tonelados en 1960, difícil se tornava preparar o porto da Beira para esse movimento, a não ser com gandes modificações no tricado da linha férrea até Salisbúria e com a duplicação da via.

As obras no porto e no caminho de ferro, que seriam necessárias para tal fim, atingiram cifras astronómicas e apresentavam, atem dos enormes encargos a suportar pelo tráfego, grandes inconvenientes sob o ponto de vista da estratégia reconômica e militar.

De facto, a mobilização desses elevados capitais, não abria novas áreas à colonização, não apraximava a Rodésia do Sul ficaria em situação muito precária.

Nos portos da União Sul-Africana, dada a sua excessiva distância aos principais centros rodesianos (2.070 quirómetros a Bulawayo) mai se pode pensar, a não ser em caso de emergência, apenas para os produtos ricas que suportem o custo do transporte ferroviário tão longo.

A construcão de uma linha entre o porto de Lourenço Marques a a Rodésia do Sul, era postanta a única solução logica e econômica para resolver o problema das comunicações daquele pais, pois além de abrir novas e importantes à acas à colonização, tanto na Rodésia como em Moçambique, de aproximar máis do mar certas regiões do Midands, de estabelecer uma segunda via de fácil e conômico acesso para todo o território, inobiliza também um capital considerávelmente interior áquele que seria necessario dispender a portuguese e rodesianos para a transformação do porto da Beina e linha ferrea deste ate S

E assim o entenderam não so os governos dos dois países interessados, mas ainda, e unanamemente a comissão de peritos americanos, nomeada para estudar as diversas soluções que foram sugenda. Para a resolução deste problema.

A partir de fins de 1955 ficarão definitivamente resolvidas e por muitos anos, todas as dificuldades de comunicações da Rodésia com o mar, e o progresso daquete e do nasso territorio sofierão um novo e forte impulso pelo desenvolvimento das novas áreas que serão chamadas a produzir e consumir pelo allyo das locomotivas,

BOLETIM - JANEIRO DE 1953

THE NEW LOURENCO MARQUES. SOUTHERN RHODESIA RAILWAY LINE

Great satisfaction was occasioned in the whole territory of Mozambique, especially in Lourenco Marques region, by the news published by the daily press, in the middle of this month, making it known that the contract had been signed for the financing of the construction of the extension of the Railway Line from Guijá to the Southern Rhodeslan border. The Line when complete will be known as the The Line when complete will be known as the «Limpopo Line».

This ratiway which will have a total length of about 482 kilometres can be divided into two sections; the sectior which has already been constructed, measuring 160 kilometres, and the

Paguna 12

NOUVELLE LIGNE FERROVIAIRE LOURENCO MARQUES-RHODESIE DU SUD

C'est avec la plus grande satisfaction que dans tout le territoire du Mezambique et en particulier, dans la région de Lourenco Marques, on appris la nouvelle, publiée ce mois-ci dans la presse quoti-dienne, de la signature du contrat pour le financement de la construction du prolongement de la voir ferrée du Cuifá jusqu'à la frontière de la Rhodesie du Sude, qui, sur toute sa longueur, sera dénommer la sulgene du Limpopos.

Cette voie ferrée aura une longueur totale d'en-

[Cette voie ferrée aura une longueur totale d'en-viron 482 kilométres et pourra être divisée en deux parties: celle qui se trouve déjà construite, mesurant 180 kilométres, et l'autre, qui est en construction et aura 302 kilométres.

auia 322 kilomètres,

La première s'amorce à Moamba, gare à 53 kilomètres de Lourenco Marques, où elle s'embranche à la ligne qui, de cette ville va au Transvaal. Elle est posée sur un terrain en pente douce, les courbes sont peu nombreuses et faciles et va linqu'au Guija, près du fleuve Limpopo.

La deuxième, est le prolongement de la première.

sont peu nombreuses et faciles et va jusqu'au Guija, près du fieuve Limpopo.

La deuxièrie, est le prolongement de la première, et commence donc au Guija. Elle parcourt 23 kilomètres jusqu'au local où va être construit le barrage du fieuve Limpopo. Traversant celui-ci sur le barrage du fieuve Limpopo. Traversant celui-ci sur le barrage mène, e lei longe la rive gauche de ce fieuve vers l'amont jusqu'a atteindre la ligne de partage des roux entre le Limpopo et les plaines basse du Nord, qui sont silionnées par de nombreux cours. J'eu peu importants, mais d'une grande valeur, lorsque consendiement mis à profit en vue de développer l'élevage, car le bétail y trouve d'excellents paturages.

Elle suit cette ligne jusqu'au confluent des fieuves Limpopo et Nuanetzi. A partir d'el elle prend la ligne de partage des caux de ce dernier fieuve et des plaines du Nord et va traverser la frontiere près de la Brodésie, qui se trouve aussi en construction, et dont les travaux progressent parallélement aux notres.

de la Rhodésie, qui se trouve aussi de la Rhodésie du se travaux progressent parallèlement aux notres.

Les rampes de toute la voie n'excédent pas la moyenne de 0.0005 et les courbes ont un rayon minimum superieur à 1.000 mètres. Dans la dernière partie du parcours on a pu établir une droite longue de 110 kilomètres.

Quoique la signature du contrat de financement n'ait eu lieu que récemment, notre Administration avait déjà commencé les tavaux de prolongement de cette voie ferrée depuis la mi - Septembre de l'année dermière. Le troncon jusqu'au Limpopo était termine et ma kilomètres de terrain au-deia du fleuve étaient déjà préparés prair la pose de la voie 2500 travail-leurs indigénes, ont été utilisés et ce nombre va être maintenant augmenté jusqu'à 5000. On s'attend à ce que tous les travaux soient terminés avant la fin 1955.

La construction de cette voie avait été depuis longtemps suggérée par les Portugais, qui s'étant apri de urapide développement des territoires de l'Afrique Centrale et de la Rhodésie du Sud, en particulier, avaiant prévu des difficultés pour le libre écoulement de leur trafic avec les pays d'outre-mer, dans les conditions imposées par l'économie actuelle et qui, sans douite, deviendra chaque fois pius exigeante.

BOLETIM - JANEIRO DE 1953

section under construction, which will measure 300

The first section has its origin in Moomba, the station that joins the line of Lourenco Marques with the Transvaal, 53 kilometres from this city, and unrolls livelf in terrain with a gentle gradient, with few and easy curves, up to Guijá, on the Limpopo River.

River.

The second section is an extension of the first, thus commencing at Guija. It runs 23 kilometres to the site where the barrage of the Limpopo River will be built and, crossing the river on the structure of the barrage itself, it runs, upstream along the left bank of the river, until it reaches the altitude line which divides the hydrographic basins of the Limpopo and the low plains of the North, cut up by numerous waterways of little importance but of great value, if appropriately put to use, for cattle-breeding purposes, seeing that there are excellent pastures for cattle.

cattle.

It extends beyond this line of allitude to the confluence of the Limpopo River with the Nuanetzi River. From here it follows the watermark of the latter river and the plains of the North, crossing the border at landmark No. 14, where it will join the Rhodesian railway line which is also under construction and the work on which is progressiff synchronously with ours.

The whole of the line unfolds itself with slopes

The whole of the line unfolds itself with slopes that do not as a rule exceed 0.0005°, and curves that the not as a rule exceed 0.0005°, and curves that the not as a rule exceed 0.0005°, and curves that the last part of the course an alignment with the extension of 110 kilometers has been obtained. Despite the fact that the contract for financing was only signed now, our Administration started the work on the extension of this railway line during the middle of the past year. It has completed the stretch into the Limpopo and prepared another 24 kilometres of ground beyond the river, having used for this 2.500 native labourers, this number to be increased now to 5000, and expects to finish the work before the end of 1935.

This line was long ago suggested by Portuguese who, discerning the rapid development of the territories of Central Africa, expressly that of foothern Rhodesia, foresaw difficulties in the free drainage of its traffic, with the mother country across the sea and within the present impositions of economic order, which will without a doubt become more exacting all the time.

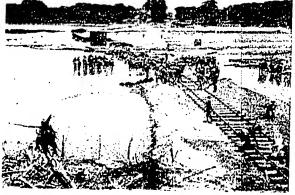

Indeed, with the volume of this traffic estimated to reach about 6.000,000 tons in 1960, it would be difficult to prepare the port of Beira to cope with this displacement, without extensive modifications in the layout for the railway line to Salisbury and without duplicating the line.

The work that would of necessity have to be carried out in the port and milway for this purpose.

would reach astronomical figures and would introduce, besides the enormous charges to be born by the truffic, great disadvantages from the point of view

traffic, great disadvantages from the point of view of economic and military strategy.

In fact, the investment of these large capitals would not open up new areas to colonization, would not bring the areas already served closer to the sea and in case of a break in the line through military or other operations. Southern Rhodesia would find herself in a very precarious situation.

En citet, et on calcule que le volume de ce trafac-attendra envison 60000000 de tonne, en 1500 u serait difficile d'unenager ce port de Betra de fraccio a faire ince a ce mouvem ni. On retait amene à po-ceder a de krande, medific ctons du trace de la von-ferree fuegu a Sali-bury et meme, à la dauble. Les tavaux qui realent necessiteit dans le poet et au chemin de fer, conteratent des rommes a tro-nomique. En plus des charges fnormes à suppreter pur le trafic, ils poe entdent de gras inconvenient du point de une strategame et economique. Pour autieurs la manification de ces fabuleaux ca-pitaux, n'ouvret pas de nouvelle, romes à la commi-sation, et ne rapprochait pas de la mer les 26mes deja descervies, Et dans le cas d'interruption de la voic a la suite d'operation militaires on autres, la Rhode le du Sud ze trouverait dans une rituation pien précatre.

BOLETIM - JANEIRO DE 1953

Página 13

The ports of the Union of South Africa, owing to their excessive distance from the main Rhodesian centres (2,076 kilometres to Bulkwayor, con hardly be considered, except in case of emergency and only for those rich products which can bear the cost of rail transport over such a great distance.

The construction of a line between the port of Lourenco Marque, and Southern Rhodesia was therefore, the only logical and conomical solution to solve the problem of that country's communications, fr' besides opening up new and important areas to development, in Rhodesia as well as, in Mozambique, besides bringing certain regions of the Midlands closer to the sea, and besides establishing an alternative outlet of clay and economical access to the whole of the territory, it also immobilizes a capital considerably smaller than what the Fortuguese and Rhodesians would have to spend on the transformation of the port of Beira and the railway his from there to Sall-bury.

Not only did the covernments of the two countrisconcerned arrive at this conclusion, but it was also the imanimous apinion of the commission of American experts who was appointed to make a study of the afferent salutions suggested for the solving of the afferent salutions suggested for the solving of the afferent salutions suggested for the solving of the end of 1955, and for many years to come.

of this problem.

By the end of 1955, and for many years to come. By the end of 1955, and for many years to come, all Rhode-als difficulties of communication with the sea will definitely have been solved and the progress of that territory and ours will have experienced a new and strong hyperus through the development of the new areas that will be summoned to produce and consume by the whistle of the locomotives. principalus centres riodésiens des ports de l'Union Sud-Africaine, (2070 kilomètres de Bulaways) on ne Peut presque pas nenser a ces demiers, saut dans les cas extrémes et seutement pour les produits riches qui aupportent le cout d'un transport ferroviaire

La construction d'une ligne de chemin de fer, en-tre le port e'. Lourenes Marques et la finodoxie du Sud, était de le 1 seule solution logique et écono-nique capable de résoudre le problème des commu-nications de ce pays. Il ouvre de nouvelles et impor-tantes zônes a la colomisation, tant en Roodesie qu'en Mozambique, il radiroche de la mer certaines régions des Midlands et il établit une seconde voie d'accès lacile et économique pour fois ces territories en ne mobilisant qu'un capital considerancement in-férieur a cetti qui serait néces aure aux Portugus et aux Rhodésiens, pour la mansformation du port de Beira et de la voie terrer Jusqu'à Salisbury.

Ainst Pont compres, non settlement les gouverhe-thents des deux pays interesses mais aussi, et a l'unaumité, la commission d'emperte américains, de-signée pair étudier les aurereses solutions qui ont eté suggérées en vue de résonare de problème,

A la fin 1955, mate, les difficultés des communi-cations de la fflandesse are la uner seguir definiti-vement résoluée et le progres de ce territoire et du Mozambique sera accru par le déscrippement de mu-velles 20nes quie les coups de siffiét de locomotive inviteront à produire et a comsonne.

BOLETIM - JANEIRO DE 1953

Pagitia 16

11: 11:

- You seem to be in doubt about the tremendous progress made in Beira during these last years.
- -Pardon me. (I said, recollecting myself) I have no doubt about it, nor can anyone have any doubt, because it is evident. My doubt is concerned with the future.
- -But that too is evident. The progress of Beira is based on the development of its port and the railway lines which feed it. Why, everyone knows that the traffice of the port is to-day twice that of four years ago, and this, increase has, clearly, a relative correlation in the railway lines. Surely you are not immorant of the wealth that such an activity brings to the region in particular, and to the territory of Mozambique in general.
- ... Yes, of course, but will this increase be maintained?
- Without a doubt. Why not? The port of Beira is, apart from anything else, the principal outlet of Rhodesia. Through it comes and goes the greater part of the traffic of that English territory, which is developing day by day. Therefore, the whote tendency is towards an increase in the traffic of our port. Frankly, I do not understand your doubts.
- But then, are you not overlooking the fact that with the construction of the Limpopo Line a large part of this traffic will proceed to Lourença Marques?
- -- Pardon me, Sir, but you are ill informed about these problems. Besides, as you will certainly naive, it would be abourd to consider that the Government would spend thousands of scontoss on the develop-ment of the port of Beira and the fullway line to Rhodesia, only to transfer the traffic to Lourenco
- Yes, that is true I must confess I only arrived in Berra yesterday after a long absence, and I have not yet studied this problem. I have merely repeated and a little unconsciously at the communicated to me by some friends. that, the fear
- communicated to me by some Iriends.

 Just as well, for I was beautiful to take you for a defeatlst. Allow me to collected you southern Rhodesia is an inland country that is, the cannot communicate with the sea unless through other countries. Her development, her economic expansion, is therefore, dependent upon the facility of these communications and the price of transport. The whole population of Rhodesia his For some Case now shown a certain nervousness at being scattled upstor they do not feel secure with only one line giving access to the sea, the Line of Beira, for the port of the Union of South Africa are at an un-economic distance for railway transport emore than 2,000 kilometres from Pott Elizabeth to Bulewayor. Therefore, whatever the possibilities of the port of Beira, the Rhodesian feverabily scarched for an alternative outlet. And if the Limpopo Line had not come about to satisfy this very legitimate aspiration, they would have had to find some other solution, and indeed, some solutions were suggested in the press by different people, fortuningly without consequences. consequences

by reflex action of the current of my previous a me- peasées et en partie, les neurialent Hésitent, thoughts than by voluntary action, replied:

-Do you think so?

antérioures, que volontairement, le répondis:

- -- Vous trouvez?
- Il semble, Monsieur, que vous doutez de l'ocuvre colossale réalisée à Beira ces dernières années.
- -Pardon, (dis-je en reprenant mes esprits), je ne doute pas, et personne ne peut douter de cette ceuvre, car elle est blen visible. Mon doute concerne l'aventr.
- -- Muls celui-là est aussi bien risible. Le progrès de Beira est basé sur le développement de son port et des voies ferrées qui le desservent. Os, tout le monda lait que la manipulation dans le port est aujourd'hui double de ce qu'elle était il y a quatre ans, et cette augmentation correspond évidenmènt, à un traffe est des voies ferrées. Vous n'ignorez certoinement pas la richesse qu'une semblaite artivité apporte à sette region en particulier, et à tout le territoire du Monumbieur, présente. Mozambique en général.
- Out, évidenment, mais cette augmentation re maintlendra-t-clie?
- Sans doute, Pourquoi pas? Le port de Beira est micre tout, la principale porte de la finodesie. Par un rentre, et par lui sort, la majeure partie du trafte de ce territofre anglaia, qui ac développe de Jour en jour. Donc, tout tend à ce que le mouvement de notre port ausmente. En toute franchise, je ne com-prends pas, vos craintes.
- Mat, your n'ignorez per du'avec la construction de la ligne de Limpopo, une grande partie de ce mouvement passera a Lourenco Marques?
- Pardon, je vods, crois mal renseighé à ce sujet. D'attleurs, vous en conviendrez, il serait absurde d'admettre que le Goivernement soit en train de dependr de nombreux milhards d'esdudus dans les conjuement du port de lietra et de la vole ferrée, at le trains affait être transfère à Lourenco Marque.
- out, c'est vant. Je dois avouer que le suit-arente hier à Betra, après une longue absence, et que le nar pas encore etudié ce problème, de me suita simplement, et une peu incorreciemment, futé l'écho de cranites que m'ont transmises quelques anits.

Hemeusement, car fallat, vous prebdre pour un definitite Permettez-not de vous celairer, La Rhodele du Su4 est un pays interieur c'est-Adire, qu'il ne peut communiquer avec la mer qu'au travet, d'autre, pays. Son développement, sont expansion économique est donc dépendante de la incilité de ces communications, et du prix des teatsports. Toute la ioputation de la Rhodé-le manifestart, depuis lons temps, une certaine inquietude due à l'isliement ou elle vivait et ne se sentiau pas en sécurité avec une seule voie d'accès à la mer, la ligne de Bêtra, car les ports de l'Union Sud-Africatine sont à une distance anti-économique pour le transport fertovalire finisde 2009 kilomètres de l'ent Elizabeth à Bulawayon. Donc, malgre toutes les facilités du port de Berra, les l'indésens cherchaient hâtivement une seconde voie, une voile d'alternatives comme ils le proclament Aussi, 371 n'y avait pas la ligne de Limpopo four satisfaire ce désir, qui est très Justifé, l'is auraient eu à chercher une autre solution. Et, en Heusensement, car Pallat, vous prepare pour un

So, I and you, what will be more advantageous to Beira, an alternative outlet through the Union South Africa or even through English East Africa, or an outlet threshill Lourence Marques? I helieve there can be no two opinions on the matter, the outlet through Lourence Marques is the most advantageous, because, besides clossing regions of our territory that are not developing through a lack of adequate transport, it permits the Portugues authorities, by common consent with the Rhodesians, to establish an equilibrium of traffic that will not prejudice Beira. Therefore, in my opinion, the Limpopo Line offers the most solid guarantee of protection of Beira's rightful interests.

... Yes, that is an aspect of the question to be

I had hardly uttered these words when the plane was alighting on the runway of the Quelimane airport. We interrupted the conversation to look through the windows. My interfector beckened with his hend through the glass to a group that was standing close to the airport building while the eDoyes was coming to a standstill.

We got out. The gentleman with me was approach ed by two men who greeted him warmly and they moved away talking.

moved away talking.

Thinking that I would have the pleasure of continuing the talk with my distinguished stranger. I gave thought to the matter and prepared some questions aimed at my further enlightenment; but to my soriow I found that the gentleman would not resume his seat in the plane which was beginning to move and take to the air once more.

Only then did I heed the fact that I did not have the opportunity to get to know his mane, or to thank aim for his, to me, valuable information, which I am doing through this medium, in this second chronicle of my impressions of Berra, hopping that it will reach him.

effet, quelques personnes ont suggere dans le prese rhodestenne, d'autres solutions, heaten-mené can-conséquences

Ainsi je vou, demande ce qui sera le plus avantageux pour Beira; une seconde voie a travers l'Union Sud-Africaine, ou même de l'Afrique Orientale An-f alse, ou la voie de Lourenco Marques? Je cois qu'il Sud-Africaine, ou même de l'Afrique Orientale Anf'aise, ou la voie de Lourenco Marques? Je crois qu'il
ale peut pas exister deux comions à ce sujet. La voie
de Lourenco Marques est la plus convenable, parce
que non seulement elle traverse de, régions de notre
territoire qui ne se développatent pas, fauie de
transports adéquets, mais elle permet aux Autorités
portugaises, d'un commun accord avez les rhodésiennes, d'établir un juste equilibre de traite qui ne
peut pas nuire à Beira. Pour cette raison, à mon avis,
la ligne du Limpopa constitue la plus solide garantie
de la défense des Justes interets de Beira.

— Out, c'est, en effet, un aspect de la question
qu'il faut considérer.

Ces paroles à peine prononcées, l'avion -e posait
sur la piste de l'aéroport de Quelimane. Nous arrêtons notre conversation pour resarder par les hubiots.
Mon interlocuteur situait de la main, a travers la
virre, un groupe qui se trouvait pres de l'aérogare,
tandis que le cloves stoppait.

Nous sortons Mon compagnon fut abordé par
deux messieurs qui l'ont embrassé et avec lesquels il
s'éloigna en causant.

Croyant que l'aunais le plaisit de continuer ma

deux messieurs qui l'ont embrassé et avec lesquels il s'éloigna en causant.

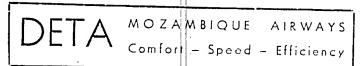

Croyant que l'aunais le plaisir de continuer ma convenation avec cet inconnu, le suis resté en réfléchissant sur la question et le préparais quelques questions à lui poser pour mieux m'éclairer. Mais, a mon grand regret. L'ai vériffe que mon compagnon n'avait pas repris piace dans l'avion, qui commenca à rouler, pour de nouveau, s'envoier.

Ce n'est qu'a ce moment que je me sais aperçu que je n'avais pis eu l'occasion de lui demander son nom, ni de le remercier de ses précleux renseignements; ce que je fais par cette voie, dans cette seconde chronique sur mes simpressions de Beiras.

J'espere qu'elle lui parviendra

N. fl.—Autorisés par le journal «Quardian» de Lourence Marques, nous reproduisons interaciement l'article qui sous le titre «Impressions de Beira» co quotidien a publie en editorial.

L'article, qui, au commencement nous donne l'impression de se référer sculement aux aspects economiques de la ville de Beira. Init pour nous monseures de la ville de Beira, linit pour nous monseurer les aspects economiques des deux ports: Beira et Lourence Marques, devant la construction de la nouvelle linne du Limpone destince à servir nos voisins de la Rhodesie. Cela nous fait apporter à nos lecteurs, par l'entremise de ce Bultetin, le resultat de l'observation de quelqu'un qui, à couvert d'un nacudonyme, nous donne l'impression de bien connaître les questions des Ports, Chemins de Fer et Transports du Mozambique. Transports du Mozambique.

BOLETIM - JANEIRO DE 1953

BRILHANTES RESULTADOS NO PORTO DA BEIRA, EM 1952

Enserra o ano de 1952, o perto da Belra, com mais, uma vitória sobre os anos anteriores, havendo conseguido manuscar cerca de 2.600.000 toneladas de carga, apesar de nos primeiros quatro meses do ano as condições de trabalio, tanto no porto como na linha do Caminho de Perro da Beira, terem sido pessimai, devido às constantes chuyadas que provocaram constantes interrupções no trabalho e difficultaram a cir

Tomando como base de comparação o manuscamento de carga efectuado em 1948, verifica-se que de então para cá, o porto da Beira tem de ano para ono conseguido elevar considerávelmente o seu rendi-

mento. Assim, logo em 1949 a estatistica mostra um aumento de 25 %, que em 1950 sobe para 40 %, em 1951 para 50 % e em 1952 para 70 %.

Estes resultados progressivos, forem obtidos sem qualquer aumento de cais pols as novas instalações para o manus-camento de combustiveis líquidos e minério, encontravam-se ainda em experiência ao terminar o uno de 1952.

Contributram, portanto, para este importante sucesso apenas, a magnifica organização das C. F. M., a dedicada collaboração de todos os que trabalham no porto da Beira e o atunento de material para o reequipamento de cais e do caminho de ferro.

Hoje, pode dizer-se que a navegação não sofre, no porto da Beira, qualquer atrazo, sendo a maior parte dos navios atrazados ao cais no próprio dia da entrada no porto.

Constantemente, a Direcção da nossa Divisão da Beira, recebe cartas de louvor das companhilas de navegação bem como dos importadores e exportadores da Rodésia, que mostram charamente haver a no-sa Administração não apenas cumpride, mas sim ultrapassado além de toda a espectativa, as promesas teitas nos usuários do porto da Beira.

SPLENDID RESULTS OF THE PORT OF BEIRA IN 1952

For the port of Beira the year 1952 ends with another victory over previous years, as it has another victory over previous years, as it has succeeded in handling about 2,000,000 tons of cargo, despite the fact that for the first four months of the year the conditions of work were extremely bad, in the port as well as on the Railway Line of Belria owing to the continuous rains which caused constant interruptions in the work and complicated the circulation of trains.

Taking as a basis of comparison the cargo handled during 1948, it is seen that from then until now, the port of Beira has year by year considerably increased its performance. Thus, already in 1949 the statistics showed an increase of 25%, which rose to 40% in 1950, to 50% in 1951 and to 70% in 1952.

These progressive results were obtained withouth any enlargement to the wharf, seeing that the new instalations for the handling of inflammable liquids and ore were still being tested at the end of the year 1952.

Only the magnificent organization of the CFM, the devoted collaboration of all who worked in the port of Beira and the increase in material for the re-equipment of the wharf and the railway, did therefore, contribute to this important achievement.

Today it can be stated that there is no delay of shipping in the port of Beira. Most ships are docked on the same day that they enter the port.

The Directorate of our Division in Beira is constantly receiving letters of praise from the shipping companies as well as from importers and exporters in Phodesia, which clearly proves that our Administration has more than fulfilled their promises matter them who was the part of Beira. made to those who use the port of Beira.

BRILLANTS RESULTATS DU PORT DE BEIRA EN 1952

Le port de Beira termine l'année 1952 avec une victoire de plus sur les années précédentes, maigre victoire de plus sur les années précédentes, maigre les, détestables conditions de services des premiers quatre mois oû, des pluies continuelles ont occa-sionné de constantes interruptions du travail dans le port, et out rendue diffiche la circulation des trains sur la ligne du Chemin de Fer de Berra. En prenant comme base de compination la ma-nipulation effectuée en 1948, on vérifie que depuis cette année, le port de Berra a réuset a élèver cons-dérablement, chemin autre production.

rette année, le port de Bern a réussi a élèver considérablement, chaque année, son rendement. Ainsi, déjà en 1949, les statistiques montrent une ausmentation de 25%, qui, en 1950, est montee à 40 %, en 1951, a 50%, et en 1952, à 70%.

Ces résultats progressir, oet été obtenus sans aucun prolongement du quai, car les nouvelles instadations pour la manipulation des combustibles liquides et des minerais, se trouvaient encore en regime d'essat à la fin de 1952.

Donc, ce sont seulement la magnifique organisation des C. P. M., la collaboration dévouée de tous ceux qui trovallent au poit de Beira et l'ausmentation du matériel de rééquipment des quals et du chemin de fer, qui ont contribue à ce grand success. Aujourd'uni, on peut dure que la navigation ne sonifre pas de retards dans le port d. Beira. La plupurt des navires vont a quai le jour même de leur entrée dans le port.

entree dans le port.

La Direction de notre División de Beira recoit constamment des lettres de felicitations des compaentistamment des recress de resentations de comparateurs et exportateurs de la Rindeste Ces lettres montrent clairement que notre Administration a, non seulement tenu les poinnerses lattes aux usages, du port de Beira, mais le a d'Op), ée, au-deia de toute rsperance

NAVIOS QUE NOS VISITAM

A Elierman & Bucknail Steamship Co, Ltd., é uma empresa de naveguelo britânica muito conhecida no nosso território, cujas portos principals, Lourenco Marques e Beira, as suas unidadedesde há muito visitam com regularidade.

Por fundada pelos Srs. Renry Bucknail & Sons, que em 1892 iniciaram carieiras regulares entre a Grá-Bre,anha e a Africa medidinal, a principio, com navio, de carga apenas e, poucas anodepois, com navios de passageiros também.

Paz hoje parte de um grupo de cinco companhias conhecidas sob o nome de Ellerman Lines Ltd., que possui 100 unidades, estando além disso associada a esse grupo a Ellerman Wilson Line proprietária de 28 navios. No entanto, desta organização sómente a Ellerman & Bucknail Steamship Co, Ltd. e a Hall Line se dedicam às carreiras de Africa.

Possui alojamentos para 107 passageiros em classe única, distribuidos por 37 camarotes de casal, dos quais 4 cuites», e 12 individuais, dispondo alem disso de 21 camas «pullman» para serem adaptadas aos diversos camarotes conforme for conveniente.

As instolações destinadas aos passageiros compreendem uma espaçosa sala de jantar, sala de estar, sala de visitas, sala de leitura, sala de fumo e uma va anda-café. No convês superior existe uma magnifica piscina no centro de um terruco no qual estão dispostas mesas e cadeiras formando um conjunto muito atuante. atracute.

As instalações para crianças compreendem um a amp sala com brinquedos e um convês de recreio A decoração dos interiores do navio, bem com o a mob a, foram objecto de um cuidado muito especial dos construtores que conseguiram dar-lhe u a ambiente moderno, elegante e extremamente conseguiran.

Merecenos especial referência a pintura mural na escadaria da parte da rê, que representa uma cena do desembarque do navegador português. Bartolomeu Dias no rio do Infante em 1482.

A aparelhagem de navegação inclui o equipamento mais moderno em uso na marinha mercante. Este navio transporta também carga para o que dispõe do 5 espaçosos porões equipados com 14 paus de carga de 5 a 30 topolodos.

Este navio transporta fambém carga para o que dispõe de 5 espaçosos porões equipados com 14 paus de carga de 5 a 30 torechadas.

O «City of Port Elizabeth» é comandado pelo capitão da marinha mercante Br. H. Percival, comodoro da frota da Elicaman desde Outubro da 1948. Encontrasse há 40 anos ao serviço deste grupo de companhas, tendo sido piomovido a comandante em 1923. Possul a condecoração da O. B. E pelos serviços brestados durante a ultima guerra.

SAD agentes desta componida em Lourenço Marques a muito conceituada firma. The Lourenço Marques Forwarding Co.

SHIPS THAT CALL ON US

The Ellerman & Bucknall Steumship Co Ltd. is a British shipping company very well-known in our territory as their ships have been calling regularly at our main ports, Lourenco Marques and Betra.

since long ago.

It was founded by Messes, Henry Bucknell & Sons who in 1892 initiated regular services between Great Britain and Southern Africa, at the beginning with cargo boats only and a low years later also with Dassenger altips.

BOLETIM - JANEIRO DE 1913

BATEAUX QUI NOUS VISITENT

La firme «Ellerman & Bucknall Steamship Co. La firme efflerman & Bucknall Steamship Co., Ltd s. est une entreprise de navigation britannique rès connue au Mozambique, dont les ports principaux, Lourenco Marques et Beira, sont visités depuis longtemps, et régulièrement par ses unités. Elle à ête fondée par M. M. Henry Bucknall & Bons, qui en 1892, ont inauguré les services réguliers entre la Grande-Bretagne et l'Afrique méridionale. Ils unit débuté avec des cargos automobiles.

ont débuté avec des cargos auxquels, quelques années après, ils ont ajouté des bateaux de passagers.
